Altar Valley Berms — Paper 2

Distinguishing Breaches from Flanks

Figure Registry Report

Generated TBD

This document summarises each registered figure for Paper 2 (breach vs. flank analysis). Add figures below using `\figentry` as they are created and registered in `figures/paper2/figure_registry.txt`.

Figure 2

Field	Content
Figure	Figure 2
File	`fig2.png`
Updated	2026-03-01 16:46
Statistical test	Grouped comparison of berm outcome proportions between Long and Short berm classes, with per-metric 2×2 contingency-table significance tests shown as bracket annotations.
Interpretation	Outcome proportions differ by length class, and this figure serves as Paper 2 Figure 2 for the breach/flank-focused comparison.

Table 1: SI Table 2: Berm outcome proportions by length class (threshold = 60 m). p-values from one-sided Fisher exact tests in the direction of the observed difference. Updated 2026-03-01 16:47.

Outcome	P(Long > 60 m)	P(Short ≤ 60 m)	Δ (pp)	p (1-sided)	Sig.
Intact	0.4710	0.7040	-23.3516	0.0000	***
Any failure	0.5290	0.2960	23.3516	0.0000	***
Breach	0.2180	0.0800	13.7885	0.0000	***
Flank	0.3110	0.2160	9.5631	0.0016	**
Vegetation response	0.4870	0.4640	2.3043	0.2843	ns
Breach | failed	0.4120	0.2710	14.0874	0.0077	**
Flank | failed	0.5880	0.7290	-14.0874	0.0077	**
